EXPERIENCE (6 years of experience. LinkedIn - <https://www.linkedin.com/in/jatinrohilla/>)

Amazon US, SDE 2 | June 2025 - Present

- ❑ Owned the migration of **Amazon Role Guidelines**, defined the normalized schema and end-to-end architecture to convert misformatted Word documents into structured JSON docs; **Built AI-assisted Python pipelines** to process 130+ docs into 500+ job-code-level docs. Surfaced this data via a new service-backed UI portal; partnered with science teams to build a vector index over this data, **enabling LLM-powered, semantically rich queries**.
- ❑ Owned the implementation of the new AnnualReviewSummary rating for the 2026 Evaluation Cycle, evolving the computation engine to support chained calculations and complex override rules, critical for the Q1 cycle.
- ❑ Acted as primary owner for multiple high-severity incidents during evaluation cycles, including sensitive-data redaction in prod logs, and several bug fixes requiring analytics schema change mid-cycle followed by full backfills.

Amazon Ireland, SDE 2 | Dec 2024 - June 2025

- ❑ Owned several key APIs and workflows in the **re-architecture of the internal Talent Evaluation platform** for the Q3 2025 cycle. This critical redesign goes on to support even more complicated computation in the 2026 Q1 cycle.
- ❑ Designed and implemented a **header-based regional routing mode** in the internal reverse proxy, allowing clients to enforce data residency and GDPR-compliant routing while maintaining multi-region traffic flows. Introduced **end-to-end correlation IDs** across frontend and backend for the AtoZ platform, setting standards for request tracing and significantly reducing time to diagnose complex cross-service issues.

Amazon India, SDE 1 - SDE 2 | Feb 2020 - Dec 2024

- ❑ Led the development of the **Common Async Notification Gateway**, a unified multi-channel (Email, SMS, WhatsApp) notification platform to centralize notification services, cutting the integration time from ~4 weeks to ~3 days.
- ❑ **Led the expansion of the ASIN Forecasting System** for Amazon India Fresh FCs and Spokes, designed solutions tailored to India specific constraints and backtesting accuracy improvements. The system is currently live for India and supports asin demand planning for Amazon India Fresh FCs at scale.
- ❑ **Led the Weighing Scale Integration project**, designing a Bluetooth-based solution to transmit real-time weight data from physical scales to Amazon systems. Coordinated with 6+ cross-functional teams to implement and launch the system across Amazon India Fresh FCs. Built an analytics pipeline to analyze this data for operational insights.
- ❑ **Designed and implemented the Guided Picking System's** 'cart' and 'lifecycle' components with transactional APIs with complex rollback logic, and observability. Launched the system in Amazon Fresh FCs across India.
- ❑ **Led the Upaj crop management initiative** from concept to Play Store launch, managing 2 SDEs and 2 interns, prioritizing the roadmap, resolving system-wide issues, and driving adoption to 1,000+ farmers.
- ❑ **Led the Angular-to-React migration** of multiple internal associate tools for the Fresh Supply Chain team defining migration strategy, and guiding 2+ SDEs and 2+ interns to successfully migrate 4+ applications.
- ❑ **Developed the Generic Integration Tests Framework** for Payment Method Plugins that enables no-code test creation using JSON I/O, cutting integration test development time from ~2 weeks to ~2 days.

EDUCATION

Master's degree	Master of Computer Applications	University of Delhi, India	2017 - 2020
Bachelor's degree	BSc (Hons) Computer Science	University of Delhi, India	2014 - 2017
